**Focus: Webpage Creation**

Age related vocabulary

| **Copyright** | An original piece of work is covered by copyright. It could be a piece of music, a play, a novel, photos or a piece of software. Copyright can be enforced by law. It is against the law to copy and distribute copyrighted material without the copyright owner's permission. | **HTML** | Hypertext Markup Language (HTML) is used by website developers to define the structure of a website. A website user then uses a browser (which can understand the HTML and render it) to view the webpage |
|---|---|---|---|
| **Webpage** | An online page of information with words, pictures, video and sound that we see on a screen. | | |

| I can explain the implication of linking to content owned by others and create hyperlinks to link to other people's work | Before ☐ | After ☐ | |

**Key Knowledge**

The web is made up of lots of websites. Each website contains webpages.
A webpage can have videos, pictures, words and games on it.
You can find lots of different things on the web, for example information about your favourite sports team or singer.
You can use the web to help you learn by looking up facts and information or playing learning games.
Computers have programs called browsers, which are used to access the web.
A search engine will look for things on the web for you.
You just have to enter keywords for your search. Keywords describe what you are looking for.
